

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A system for providing a user with access to an information site hosting information with controlled access, ~~wherein there is provided the system~~ comprising:

a management site remote from the information site, ~~the user logs on to the~~ management site comprising:

a means for authenticating ~~and the user is authenticated by when the user logs~~ onto the management site,

a means for processing a request by ~~the user requests the management site for~~ access to information which is hosted at the information site,

a means for logging the user on to the information site and providing authorization ~~the user is logged on to the information site to thereby authenticate the user's with authenticated~~ access to the information, and wherein the system further comprises:

a means for ~~there is~~ direct communication between the user and the information site for the supply of information from the information site to the user, and

a means for ~~also~~ direct communication between the management site and the information site for exchange of management information.

2. (Original) A system as claimed in claim 1, wherein the management information comprises data relating to the user's activities on the information site which is provided from the information site to the management site and stored on the management site for analysis.

3. (Original) A system as claimed in claim 1, wherein the management information is user authentication data provided by the management site.

4. (Original) A system as claimed in claim 1 wherein the management site hosts an open learning management system and the information site is an external learning content provider.
5. (Original) A system as claimed in claim 4, wherein the open learning management system enables access to a plurality of external learning content providers.
6. (Original) A system as claimed in claim 5, wherein the open learning management system also hosts integrated learning content.
7. (Currently Amended) A system for providing a user with access to learning content on an information site hosting information with controlled access, ~~wherein there is provided the~~ system comprising:
 - a management site which is remote from the information site and which hosts an open learning management system, the management site comprising:
 - a means for authenticating the user when the user logs on to the management site and the user is authenticated by the management site,
 - a means for processing a request by the user requests the management site for access to learning content which is hosted at the information site,
 - a means for logging the user onto the information site and providing authorization the user is logged on to the information site to thereby authenticate the user's with authenticated access to the learning content, and
 - wherein the system further comprises:
 - a means for there is direct communication between the user and the information site to provide the learning content to the user, and
 - a means for there is also direct communication between the management site and the information site for exchange of management information which includes (a) data relating to the user's activities on the information site which is provided from the information site to the management site and stored on the management site for analysis; and (b) user authentication data for access to the learning content, the authentication data being provided by the

management site.

8. (Currently Amended) A data processing system for use at a management site, configured to provide a user with access to an information site hosting information with controlled access, the data processing system comprising:

a means for authenticating ~~being arranged to authenticate~~ a user,

a means for processing ~~to receive~~ a user request for access to information which is hosted at the information site,

a means for logging the user on to the information site and for providing authorization ~~and to arrange for the user to be logged on to the information site to thereby authenticate the user's with authenticated~~ access to the information, said means comprising ~~by means of~~ direct communication between the user and the information site, and

a means for ~~the data processing system also~~ establishing direct communication between the management site and the information site for exchange of management information.

9. (Original) A data processing system as claimed in claim 8, wherein the management information comprises data relating to the user's activities on the information site which is provided from the information site to the management site and stored on the management site for analysis.

10. (Original) A data processing system as claimed in claim 8, wherein the management information is user authentication data provided by the management site.

11. (Original) A data processing system as claimed in claim 8, configured as an open learning management system providing access to an information site provided by an external learning content provider.

12. (Original) A data processing system as claimed in claim 11, wherein the open learning management system provides access to a plurality of external learning content providers.

13. (Original) A data processing system as claimed in claim 12, wherein the open learning management system also hosts integrated learning content.

14. (Currently Amended) A data processing system for use at a management site hosting an open learning management system, configured to provide a user with access to an information site hosting information provided by an external learning content provider with controlled access, the data processing system comprising:

a means for authenticating ~~being arranged to authenticate~~ a user,

a means for processing ~~to receive~~ a user request for access to information which is hosted at the information site,

a means for logging ~~and to arrange for the user to be logged on to~~ the information site with authenticated access to the information, said by means comprising of direct communication between the user and the information site, and

a means for ~~the data processing system also~~ establishing direct communication between the management site and the information site for exchange of management information which includes (a) data relating to the user's activities on the information site which is provided from the information site to the management site and stored on the management site for analysis; and (b) user authentication data for access to the learning content, the authentication data being provided by the management site.

15. (Currently Amended) A data processing system for use at an information site hosting information with controlled access, which is arranged to cooperate with a management site remote from the information site, the data processing system comprising:

a means for permitting ~~being configured to permit~~ a user to be logged on to the information site via the management site with authenticated access to the information, and

a means for direct communication between the user and the information site for supply of the information to the user, and

a means ~~the data processing system being further configured~~ for direct communication with the management site for the exchange of management information.

16. (Original) A data processing system as claimed in claim 15, wherein the management information comprises data relating to the user's activities on the information site which is provided from the information site to the management site and stored on the management site for analysis.

17. (Original) A data processing system as claimed in claim 15, wherein the management information is user authentication data provided by the management site.

18. (Original) A data processing system as claimed in claim 15, configured as a learning content provider for use with a management site which is an open learning management system.

19. (Currently Amended) A data processing system for use at an information site hosting learning content information with controlled access, which is arranged to cooperate with a management site remote from the information site, the data processing system comprising:
a means for permitting ~~being configured to permit~~ a user to be logged on to the information site via the management site with authenticated access to the learning content information, and

a means for direct communication between the user and the information site for supply of the learning content information to the user, and

a means ~~the data processing system being further configured~~ for direct communication with the management site for the exchange of management information which includes (a) data relating to the user's activities on the information site which is provided from the information site to the management site and stored on the management site for analysis; and (b) user authentication data for access to the learning content information, the authentication data being provided by the management site.
